

TABLE OF CONTENTS

Chris Jones

Regular intervention monitoring providing valuable insights into vegetation responses to environmental flows on rivers *page 1*

Mark Stacey

A long-term temporal evaluation of environmental flow regimes in southern Victoria *page 10*

John Gooderham

Tactics for stretching a waterbug based monitoring program across a continent *page 18*

Zeb Tonkin

Monitoring fish responses to environmental flows across Victoria: a shift towards understanding processes, population dynamics and long-term projections *page 25*

Yi-Ming Ma

Development of a state-wide map of the extent and location of high value, at-risk groundwater dependent ecosystems *page 26*

Simon Mould

Sociogeomorphic river recovery: integrating human and physical processes *page 33*

Sandra Brizga

Rivers, amenity and art: the geomorphologist's role in health and liveability *page 41*

Sean Phillipson

Delivering priorities for the Gippsland Lakes through partnerships *page 46*

Julie Francis

New ways of collaborating for improved catchment outcomes *page 54*

Jesse Webster

ALRS - Key observations and lessons associated with the roll out of a state-wide flood recovery program *page 66*

Penny Rogers

Applied Fluvial Geomorphology in the 21st Century: embracing a Waterway Asset Management approach *page 72*

James Grove

Dredging up the past: what are the current implications for Victorian rivers from historic gold dredging? *page 77*

Andrew Simon

Rates of bank erosion under natural and regulated flows in the Upper Murray River system - Khancoban Dam to Jingellic *page 86*

- Andrew Simon**
Rates of Bank Erosion under Different and Alternative-Flow Releases along the Mitta Mitta River - Developing Metrics to Limit Erosion Downstream from Dartmouth Dam
page 94
- Neda Yousefi**
Assessment of channel expansion and contraction using cross-section data from repeated LiDAR acquisitions in the Macquarie Marshes, NSW
page 103
- Rebecca Mabbott**
Trialling the use of controlled burning for exotic vegetation management in novel riparian ecosystems
page 111
- Simon Treadwell**
Causes and management of dieback in River Red Gum trees along Malcolm Creek, Craigieburn
page 119
- Ben Pearson**
Oxley Creek Transformation – An overview of waterway issues and restoration strategies
page 127
- Greg Peters**
Riparian fencing: can't we just make them do it? No, and here's why
page 137
- Sarah Grimish**
Restoring Riparian Resilience in the Mary River catchment - an integrated catchment management approach
page 147
- Lisa Duncan**
When to break the habit: Adapting the FLOWS method for use in the highly modified Lower Broken Creek
page 158
- Andrew Sharpe**
Lifting our gaze: improved environmental water management requires a landscape-scale approach
page 166
- Amanda Shipp**
Maintaining drought refuge pools in the Wimmera River
page 174
- Terry Chan**
Detection of long-term change in waterway health due to flow
page 182
- Parvin Zavarei**
Werribee River Ecohydraulics
page 189
- Craig Clifton**
Use of catchment carbon offsets to build climate resilience in catchments and help the water sector achieve zero net emissions
page 198
- Glenn Browning**
Are trade-offs acceptable or just accepting defeat?
Page 206

- Chris Cleary**
Collaborative water management in the Ringarooma River catchment Tasmania,
Australia *page 213*
- Karen White**
Imagine the Yarra: how community, legislation and land use planning is shaping the
future of an iconic waterway *page 223*
- Phillip Lorenzelli**
What happens to the stream when the coal mine closes – A cautionary tale for
legislation, licencing and best practice *page 232*
- Sam Lewis**
Bank-stabilising rock fillets increase diversity and abundance of macro invertebrate and
meiofaunal communities in the Kalang estuary, NSW. *page 240*
- Abdullah Baky**
Understanding the evolution of floodplain channels by avulsion: An investigation on the
floodplain of Murray River *page 248*
- Misko Ivezich**
Channel erosion risk assessment of south east Queensland *page 256*
- Hugo Bowman**
Managing erosion from vessel wash on a reach of the Murray River *page 265*
- Andrew Briggs**
Mid-King Cooperative Avulsion Management *page 272*
- Ross Hardie**
Rehabilitation of the Nimmie-Caira *page 278*
- Ben Vincent**
Seed germination traits of two common floodplain eucalypts: optimum germination
temperatures and influence of leaf litter *page 286*
- Jo Slijkerman**
From planting willows to pulling them out: The past, present and future of riparian
management in Victoria *page 294*
- Luke McPhail**
Development of the stream rehabilitation guidelines for Queensland *page 305*
- Apanie Wood**
Is my river health intervention project working? Results and lessons learned from 10
years of riparian works monitoring in the Melbourne region. *page 309*
- Scott Hardie**
Evaluation and redirection of a long term broad scale river health monitoring program in
Tasmania Australia *page 317*
